

Overview

The Geneva Group provides cost effective software solutions that are tailored to meet your needs. From custom databases and web applications to ongoing support, the Geneva Group offers a wide range of solutions and services that can minimize your costs and increase productivity. We work side-by-side with you to better understand your existing business, allowing us to offer cost effective solutions in a timely manner.

The Geneva Group offers a full range of solutions and services including:

- Project Management
- Application Development and custom programming
- Network support services
- Web Applications and Services
- Security Auditing

In today's changing economy, companies are looking to reduce costs and increase revenue. But projects still need to be completed to realize those goals. From small businesses with only five employees, to large corporations, we've continually met the needs of businesses both large and small since 1987, including:

- AT&T Wireless
- Boeing Company
- Washington State Convention Center
- Associated Grocers
- Greater Seattle Chamber of Commerce

Our staff has the development skills and professional experience to get your project done fast. Our project managers create a detailed functional specification based on our clients needs. Our project managers will gather requirements and offer input on business processes that have cut costs from prior experience, making your application smoother, cheaper, and faster. They'll be there every step of the way until you are totally satisfied.

Our developers use the tool that will best work for the job. Whether it's Microsoft .Net tools or Oracle, our developers use what's right for our clients. Our Certified Microsoft developers have the experience to create fast

applications using any Microsoft tool. But don't discount your old technology; our developers are skilled in porting older applications to new platforms and architectures, as well as creating device drivers for your custom hardware. Some of the more recent projects we've completed include technology such as:

- Microsoft DNA Architecture (design/build distributed business applications)
- Microsoft COM+ (Component Services with Transaction Server)
- Microsoft .NET Framework and Architecture
- VB.NET and ASP.NET applications
- Data Migration from Microsoft Access to Microsoft SQL Server

Network support is more important today than ever before. When the networks down, your business can come to a crashing halt. The Geneva Group offers comprehensive network support, including server configuration and virus software to keep your network running safe. We also offer support for intrusion detection systems, as well as firewalls to keep your network safe from potential security breaches.

Web applications and services are taking business by storm. Cross-platform and only a browser away, web applications and services offer increased value by making your data and employees mobile. Imagine employees having access to their current work and schedule at any workstation, and any location. The Geneva Group uses industry standard technologies such as XML and SOAP to create web services that leverage existing data, and only make the data you want available to your web applications. Some of the more recent projects we've completed include technology such as:

- ASP 3.0/SQL Server based Web Applications
- Data Exchange with XML
- Oracle 8i and ColdFusion 5 web application
- Apache/PHP/MySQL/Perl web application

The Geneva Group can help your business meet your goals by providing service, reliability and value. We offer flexible and creative solutions to your most difficult problems. We offer ongoing support, and can help your business grow with the ever-changing business environment.
