

Solution Technologies

In today's changing economy, companies are looking to reduce costs and increase revenue. But projects still need to be completed to realize those goals. From intranet information web sites, to hardware driver development, you need projects done quick and fast.

Some companies are going to claim they can do the job, pointing to certifications on the wall. But here at the Geneva Group, not only do we have the certifications, but we also have 15 years experience to back up our certifications. Some of the recent technology and systems we've used in projects include:

- Microsoft DNA Architecture (design/build distributed business applications)
- Microsoft COM+ (Component Services with Transaction Server)
- Microsoft .NET Framework and Architecture
- ASP 3.0 based Web Applications
- Data Exchange with XML
- VB.NET and ASP.NET applications
- Oracle 8i and ColdFusion 5 web application
- Data Migration from Microsoft Access to Microsoft SQL Server
- UNIX maintenance and administration

Not only do we use the latest technologies we offer a number of other services including:

- Migration of older applications to new platforms
- Device driver development for hardware
- Consolidation of existing applications into one application
- Convert and transfer data from one application to another.
- Upgraded, enhanced and added features to existing applications
- Custom programming design for "lost vendor" applications
- PDA software development on CE, PPC, Palm and more

The Geneva Group can help your business meet your goals by providing service, reliability and value. We offer creative and flexible solutions that meet your business needs today, as well as in the future.

Service.

Reliability.

Value.

Creative.
